# 1. Summary

- Current Node-RED editor has undo function, but no 'redo' function.
- Developers must undo carefully, because they can't undo the undo operation.
- To improve usability, we propose to implement redo function for Node-RED editor.

1

# 2. Implementation approach of Redo

- Add 'redo_history' stack in history.js, and push action to redo_history stack when undo is invoked.
- And also, when redo is invoked, pop an action from redo_history, and push it to undo_history.

undo history[]   redo history[]

B': inverse action of B

- I've made a draft pull request
  - https://github.com/node-red/node-red/pull/2221
  - Redo for subflow is also implemented (I suppose…)
